Coverage

Technical Data

Subsoiler Melior

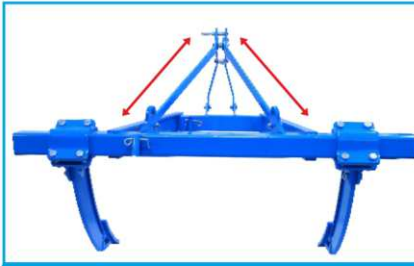

Model	Working Width(cm)	No of tynes	Underframe Clearance (cm)	Weight (Kg)	Tractor HP Required
Melior 1/85 E	8	1	85	170 Kg	55 & above
Melior 2/65 E	Min -130 Max -190	2	65	355 Kg	65 & above

FEATURES

Heavy duty frame & design

A basic frame with 120 mm seamless High strength square tube thus guarantees high strength.

Even load distribution

The short and compact design of the Melior ensures a positive center of gravity. The symmetrical positioning of the tynes on the 120 mm square box section frame ensures an even and uniform depth of both tynes.

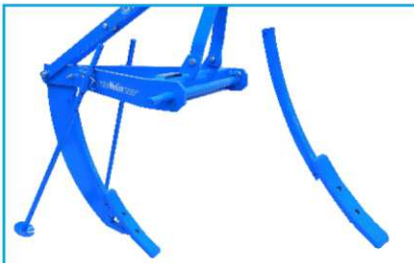

High frame clearance

Large inter-tyne and under frame clearance enables operation in dense trash conditions and virgin lands.

Protection from Damage

Double-cutting shear bolt provide protection from obstacles as it acts as an overload security and protects tractor & implement. Easily replaceable too.

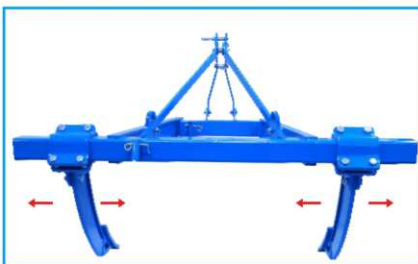

Long life wear parts

The through hardened chisel shares are reversible and thus provide longer use in field. Stalk guard protects Tyne wear and is easily replaceable.

Unique shape of Leg

The unique flat and gradual shape of the Leg makes the Melior easier to pull. It also ensures that the soil breaks up towards the front and upwards.

Adjustable Leg positions

Variable adjustment of the Leg on the frame from 130 to 190 cm for suitable tractor track width. An addition 3rd Leg is available as an accessory for other loosening measures, depending upon Tractor HP and Soil conditions.

Easy service

All wear parts are bolted on Melior machine, so easily replaceable quickly thus reduces the total maintenance time.
